

# Ring Joint Gasket Styles

## Transition Rings

Transition Ring Gaskets are used for sealing ring type joints in which the mating flanges have different ring groove diameters.

Ring Joint Gaskets can be Manufactured out of any standard ring joint gasket material.

Popular combinations of Transition Rings are R23/R24, R45/R46, R49/R50 and R65/R66. Other sizes are available on special order. These Rings are available with either oval or octagonal facings. Please specify preferred cross-section when ordering.
